

NAME

mondorestore – a restore / disaster–recovery tool.

SYNOPSIS

mondorestore [-p **prefix**] : restore your PC

DESCRIPTION

mondorestore restores data previously backed up with *mondoarchive*.

Note that mondorestore will usually automatically be called when booting a MondoRescue medium. The only exception is booting a MondoRescue medium in **Expert** mode in which case mondorestore can be evoked from the command line.

-p *prefix*

Use **prefix** to specify the name of your ISO images. By default, mondoarchive names images mondorescue-1.iso, mondorescue-2.iso, ... Using **-p machine mondorestore** will use images named machine-1.iso, machine-2.iso, ...

DIAGNOSTICS

mondorestore generates an Extremely important file: **/var/log/mondorestore.log**. When seeking technical support, attach this file to your email.

FILES

/var/log/mondorestore.log This log contains important information required to analyse mondorestore problem reports. Mondo support highly recommends sending this file with support questions. It's located under */tmp* during the restore process and moved under */var/log* at the end.

NOTES

A link to Mondo's HTML-based manual (by Bruno Cornec, Mikael Hultgren, Cafeole, Randy Delphs, Stan Benoit, and Hugo Rabson) may be found at <http://www.mondorescue.org/docs.shtml> - or in */usr/share/doc/mondo-x.xx* on your hard drive.

BUGS

It is recommend that your system has more than 64 MB ram. SCSI device order change with nuke can have unexpected results. It is recommended you use expert mode with drastic hardware reconfigurations.
