

The `shdoc` package – an example

Simon Michael Laube

03/2015

This is an example TeX-File for how to use the `shdoc` package, version v1.2.

```
01 simon@linuxmint ~ $ cd Desktop/
02 simon@linuxmint Desktop/ $ xsensors -help
03
04 Usage: xsensors [options]
05 Options:
06
07 [-f] Display all temperatures in Fahrenheit.
08 [-h] Display this help text and exit.
09 [-c] +filename Specify the libsensors configuration file.
10 [-i] +filename Specify the image file to use as a theme.
11 [-t] +time Specify the update time in number of seconds.
12 [-v] Display version number.
```

Terminal Session 1: The options of `xsensors`

One can refer to terminal sessions via `\ref` – for example: see Terminal Session 1 for the options of `xsensors`. It is also possible to automatically create the list of terminal sessions by typing `\listofsh`.

List of Terminal Sessions

1	The options of <code>xsensors</code>	1
